INDEX TO SUBJECTS

ACID, pantothenic, effects on respiratory activity, 637
Ammonia, accumulation in light and darkness, 501
—, exit in light and darkness, 521
Ammonium chloride, artificial sea water containing, effect on bioelectric potentials in *Valonia*, 819
Anax nymphs, reaction to flickering light, temperature and critical illumination for, 795
Antagonism between sodium and magnesium ions in their action upon oxalate ion, 385
Antibody and antigen, proportion in precipitates, influence of molecular weight of antigen, statistical examination, 281
Antigen, molecular weight, influence on proportion of antibody to antigen in precipitates, statistical examination, 281
Arrhythmia and block in *Nitella*, 115
Asellus, flicker response contour for, 451
Aspergillus niger, spores, effects of ultraviolet radiation, 689
Axon, giant, squid, electric impedance during activity, 649
—, giant, squid, membrane and protoplasm resistance, 671

BACTERIOPHAGE, growth, 365
—, intracellular precursor, 699
Bacteriophage-bacterium reaction, effect of sodium sulfate, 131
Bacterium-phage reaction, effect of sodium sulfate, 131
Bioelectric potentials, calculations, 139
— potentials in *Halicystis*, effects of low oxygen tension, 255
— potentials in *Valonia*, effects of artificial sea waters containing lithium chloride, cesium chloride, rubidium chloride, or ammonium chloride, 819

CALCIUM, effects on potentials in *Nitella*, 139
Carbon dioxide and light, limiting factors in photosynthesis, 21
— dioxide-chlorophyll ratio during photosynthesis, 613
Catalysis, auto-, formation of trypsin from trypsinogen, effect of formation of inert protein on kinetics, 293
Cathepsin estimation with hemoglobin, 79
Cells, whole, ghosts, and fragments, human erythrocytes, electrophoretic mobility, 1
Cellulose wall, restriction, kinetics of penetration, 147
Cesium chloride, artificial sea water containing, effect on bioelectric potentials in *Valonia*, 819
Cheliped, crayfish, adductor muscle, chemical changes in relation to double motor innervation, 193
Chemical changes in adductor muscle of crayfish cheliped in relation to double motor innervation, 193
Chlorophyll-carbon dioxide ratio during photosynthesis, 613

Chymotrypsin, beta and gamma, new crystalline enzymes, isolation, 207
Crayfish cheliped, adductor muscle, chemical changes in relation to double motor innervation, 193

DARKNESS and light, accumulation of ammonia in, 501
— and light, exit of ammonia in, 521
Drosophila, development of eye colors, properties of hormones concerned, 239

ELECTRIC impedance of *Nitella* during activity, 37
— impedance of squid giant axon during activity, 649
— potentials, calculations, 139
— potentials in *Halicystis*, effects of low oxygen tension, 255
— potentials in *Valonia*, effects of artificial sea waters containing lithium chloride, cesium chloride, rubidium chloride, or ammonium chloride, 819
Electrical impedance of muscle during action of narcotics and other agents, 567
Electricity, *Nitella*, production of quick action currents by exposure to sodium chloride, 91
Electrolytes and water, entrance into impaled *Halicystis*, 757
Electrophoretic mobility of human erythrocytes, whole cells, ghosts, and fragments, 1
— mobility of rabbit erythrocytes and ghosts, 545
Enterokinase, formation of trypsin from crystalline trypsinogen by means of, 429
—, purification and concentration, 447
Enzymes, crystalline, new, formation from chymotrypsin, 207
Erythrocytes, human, whole cells, ghosts, and fragments, electrophoretic mobility, 1
—, rabbit, and ghosts, electrophoretic mobility, 545
Eye colors in *Drosophila*, development, properties of hormones concerned, 239
—, human, intensity discrimination, 7

FISHES, genetically related, flicker response contours for, 463
Formolized tobacco mosaic virus protein, partial reactivation, 165
Fungus *Aspergillus niger*, spores, effects of ultraviolet radiation, 689

GECKO, rod retina, flicker response contour for, 555
Genetically related fishes, flicker response contours for, 463
Guaiacol, influence on effects of sodium and potassium in *Nitella*, 417

HALICYSTIS, bioelectric potentials, effects of low oxygen tension, 255
—, impaled, entrance of electrolytes and water, 757
—, impaled, entrance of water, 743
Hemoglobin, estimation of pepsin, trypsin, papain, and cathepsin with, 79
Hormones concerned in development of eye colors in *Drosophila*, properties, 239
Human erythrocytes, whole cells, ghosts, and fragments, electrophoretic mobility, 1
— eye, intensity discrimination, 7

INNERVATION, double motor, chemical changes in adductor mus-

cle of crayfish cheliped in relation to, 193
Intracellular phage precursor, 699
Ion mobilities in protoplasm, changes, 417
Ions, sodium and magnesium, antagonism between, in their action upon oxalate ion, 385
Isopod *Asellus*, flicker response contour for, 451

KINETICS of autocatalytic formation of trypsin from trypsinogen, effect of formation of inert protein, 293
— of formation of pepsin from swine pepsinogen and identification of intermediate compound, 65
— of penetration, accumulation of ammonia in light and darkness, 501
— of penetration, entrance of electrolytes and water into impaled *Halicystis*, 757
— of penetration, entrance of water into impaled *Halicystis*, 743
— of penetration, exit of ammonia in light and darkness, 521
— of penetration, restriction of cellulose wall, 147

LIGHT and carbon dioxide, limiting factors in photosynthesis, 21
— and darkness, accumulation of ammonia in, 501
— and darkness, exit of ammonia in, 521
—, flickering, temperature and critical illumination for reaction of *Anax* nymphs to, 795
—, flickering, temperature and critical illumination for reaction of sunfish to, 487
—, ultraviolet, effects on spores of fungus *Aspergillus niger*, 689
Lithium chloride, artificial sea water containing, effect on bioelectric potentials in *Valonia*, 819

MAGNESIUM and sodium ions, antagonism between, in their action upon oxalate ion, 385
Membrane and protoplasm resistance in squid giant axon, 671
Molecular weight, antigen, influence on proportion of antibody to antigen in precipitates, statistical examination, 281
Mosaic virus protein, tobacco, formolized, partial reactivation, 165
Muscle, adductor, crayfish cheliped, chemical changes in relation to double motor innervation, 193
—, electrical impedance during action of narcotics and other agents, 567

NARCOTICS, electrical impedance of muscle during action of, 567
Nitella, action currents, quick, produced by exposure to sodium chloride, 91
—, delayed potassium effect, 107
—, electric impedance during activity, 37
—, influence of guaiacol on effects of sodium and potassium in, 417
—, pacemakers in, 115
—, potentials, effects of calcium, 139
Nymphs, *Anax*, reaction to flickering light, temperature and critical illumination for, 795

OXALATE ion, antagonism between sodium and magnesium ions in their action upon, 385
Oxygen tension, low, effects on bioelectric potentials in *Halicystis*, 255

PANTOTHENIC acid, effects on respiratory activity, 637
Papain estimation with hemoglobin, 79
Penetration, kinetics, accumulation of ammonia in light and darkness, 501
—, kinetics, entrance of electrolytes and water into impaled *Halicystis*, 757
—, kinetics, entrance of water into impaled *Halicystis*, 743
—, kinetics, exit of ammonia in light and darkness, 521
—, kinetics, restriction of cellulose wall, 147
Pepsin estimation with hemoglobin, 79
—, kinetics of formation from swine pepsinogen, and identification of intermediate compound, 65
Pepsinogen, swine, kinetics of formation of pepsin from, and identification of intermediate compound, 65
Photosynthesis, chlorophyll-carbon dioxide ratio during, 613
—, light and carbon dioxide, limiting factors, 21
Porphyropsin visual system, 775
Potassium effect, delayed, in *Nitella*, 107
— and sodium, effects in *Nitella*, influence of guaiacol, 417
Potentials, bioelectric, calculations, 139
—, bioelectric, in *Halicystis*, effects of low oxygen tension, 255
—, bioelectric, in *Valonia*, effects of artificial sea waters containing lithium chloride, cesium chloride, rubidium chloride, or ammonium chloride, 819
Precipitates, proportion of antibody to antigen in, influence of molecular weight of antigen, statistical examination, 281
Protein, inert, effect of formation on kinetics of autocatalytic formation of trypsin from trypsinogen, 293
—, tobacco mosaic virus, formolized, partial reactivation, 165
Protoplasm, ionic mobilities, changes, 417
— and membrane resistance in squid giant axon, 671
Pseudemys, flicker response function for, 311

RADIATION, ultraviolet, effects on spores of fungus *Aspergillus niger*, 689
Reaction, phage-bacterium, effect of sodium sulfate, 131
Respiratory activity, effects of pantothenic acid, 637
Retina, rod, gecko, flicker response contour for, 555
Retinal basis of visual resolution and visibility of single lines at various illuminations, 593
— position and threshold stimulus intensity, 341
Rod retina, gecko, flicker response contour for, 555
Rubidium chloride, artificial sea water containing, effect on bioelectric potentials in *Valonia*, 819

SODIUM chloride, production of quick action currents in *Nitella* by exposure to, 91
— and magnesium ions, antagonism between, in their action upon oxalate ion, 385
— and potassium, effects in *Nitella*, influence of guaiacol, 417
— sulfate, effect on phage-bacterium reaction, 131
Spectrum, different parts, relation between $\Delta I/I$ and intensity for, 7
Spores, fungus, *Aspergillus niger*,

effects of ultraviolet radiation, 689
Squid giant axon, electric impedance during activity, 649
— giant axon, membrane and protoplasm resistance, 671
Stimulus, threshold, intensity and retinal position, 341
Sunfish, reaction to flickering light, temperature and critical illumination for, 487
Swine pepsinogen, kinetics of formation of pepsin from, and identification of intermediate compound, 65

TEMPERATURE activation of urease-urea system using crude and crystalline urease, 719
— and critical illumination for reaction of *Anax* nymphs to flickering light, 795
— and critical illumination for reaction of sunfish to flickering light, 487
Tension, low oxygen, effects on bioelectric potentials in *Halicystis*, 255
Tobacco mosaic virus protein, formolized, partial reactivation, 165
Trypsin estimation with hemoglobin, 79
—, formation from crystalline trypsinogen by means of enterokinase, 429
—, kinetics of autocatalytic formation from trypsinogen, effect of formation of inert protein, 293
Trypsinogen, autocatalytic formation of trypsin from, effect of formation of inert protein on kinetics of, 293
Trypsinogen, crystalline, formation of trypsin from by means of enterokinase, 429
Turtle *Pseudemys*, flicker response function for, 311

ULTRAVIOLET radiation, effects on spores of fungus *Aspergillus niger*, 689
Urea, temperature activation of urease-urea system, using crude and crystalline urease, 719
Urease-urea system, temperature activation using crude and crystalline urease, 719

VALONIA, bioelectric potentials, effects of artificial sea waters containing lithium chloride, cesium chloride, rubidium chloride, or ammonium chloride, 819
Virus, tobacco mosaic protein, formolized, partial reactivation, 165
Vision, mechanisms, theory and measurement, 341
—, porphyropsin system, 775
—, visibility of single lines at various illuminations and retinal basis of visual resolution, 593
Vitamins A_1 and A_2, distribution, 391

WATER and electrolytes, entrance into impaled *Halicystis*, 757
—, entrance into impaled *Halicystis*, 743
Waters, sea, artificial, containing lithium chloride, cesium chloride, rubidium chloride, or ammonium chloride, effects on bioelectric potentials in *Valonia*, 819
